

width = $2 \times \text{height}$
 $= 2 \times 80$

width = 160

$\therefore B(40, 0)$, $A \rightarrow (40 - 160, 0) \Rightarrow (-120, 0)$

$y_{\min} = 0$
 $y_{\max} = 80$

$t_E \rightarrow \max$
 $t_L \rightarrow \min$

$x_{\min} = -120$
 $x_{\max} = 40$

$A(x_0, y_0) = (-20, -10)$
 $B(x_1, y_1) = (50, 90)$

$D = B - A$
 $= (50 + 20, 90 + 10)$
 $D = (70, 100)$

$t_E = 0$ $t_L = 1$

Boundary	N	N.D	PE/PL	t	t_E	t_L
Left	$(-1, 0)$	-70	PE	$\frac{-120 + 100}{50 + 20} = -1.429$	0	1
Right	$(1, 0)$	70	PL	$\frac{40 + 20}{50 + 20} = 0.857$	0	0.857
Top	$(0, 1)$	100	PL	$\frac{80 + 10}{90 + 10} = 0.9$	0	0.857
Bottom	$(0, -1)$	-100	PE	$\frac{0 + 10}{90 + 10} = 0.1$	0.1	0.857

$t_E = 0.1$ $t_L = 0.857$

it is partially accepted.

$$t_E = 0.1 \quad t_L = 0.857$$

$t = 0.1$ starting point $\rightarrow (70, 100)$

$$P(t) = P_0 + t(P_1 - P_0)$$
$$\therefore t(0.1) = (-20, -10) + 0.1(70, 100)$$
$$= (-20, -10) + (7, 10)$$
$$\boxed{t(0.1) = (-13, 0)}$$

Again, $t = 0.857$

$$P(t) = P_0 + t \cdot (P_1 - P_0)$$
$$P(0.857) = (-20, -10) + 0.857(70, 100)$$
$$= (-20, -10) + (59.99, 85.7)$$
$$= (39.99, 75.7)$$

$$P(0.857) \approx (40, 76)$$

$\therefore$ And the clipped points are $(-13, 0)$ and $(40, 76)$
